

Cover Letter

Hi Alstom,

My name is Hampus Andersson and I am a software developer with hands-on experience in both backend and frontend. I also have a strong interest in infrastructure, cloud technologies and technical support. After working on system development projects at Volvo Trucks and Powertrain, I am now looking for the next step in my career. I would like to work in a collaborative and learning-focused environment like yours.

Practical experience that matches the role

During my thesis at Volvo Trucks I developed a full stack parameter database. This included a custom API and a user-friendly React interface. At Volvo Powertrain I worked in a C# team in an international and agile environment. I contributed to integrations, debugging, documentation and testing. These tasks are very similar to the responsibilities described in your job ad.

Cloud experience and technical curiosity

Besides traditional development I have worked on distributed systems using Firebase. I am now eager to build skills in Azure and other modern platforms. I enjoy learning new tools and automating workflows to improve technical processes.

Collaboration and problem solving

I am a team player who communicates clearly and listens well. I have worked with both developers and end users. These experiences have helped me understand how to solve problems in ways that are useful in practice and meaningful to others.

I am excited about the opportunity to grow with Alstom. I want to contribute with what I already know and I am motivated to quickly learn new tools that support your cloud and hosting environments.

Thank you for considering my application.

Best regards

Hampus Andersson
